

Why Partner with FleetCrew?

Choosing your Equipment Maintenance & Compliance Expert

When considering your support vendors, choosing the right partner is critical. In selecting your partner, consider what sets FleetCrew apart from the rest as your expert compliance and emission service provider.

1 Experience You Can Count On

FleetCrew staff have experience with close to 20,000 retrofits on various equipment in California. Our installation practices and processes expand across all field engines and varying applications. Through our IQ database, all of the service records continue to help us make wise Emission System Recommendations for our customers.

2 Diesel Engine Expertise

As an industry leader in diesel engine products and services, our FleetCrew Zippy Service division adds diesel engine maintenance expertise and services, allowing us to perform sophisticated engine diagnostics and provide valuable recommendations. The FleetCrew service team also performs comprehensive "Pre-Installation Compatibility" testing and datalogging to ensure engine and retrofit compatibility. We recommend that your provider does a thorough engine inspection prior to DPF installation, and perform engine repairs accordingly.

3 Product Partnership

FleetCrew offers a full product range of proven and all-verified Air Resources Board diesel particulate filter technology. Regardless of your engine's unique application and duty cycle, rest assured we have a product that suits your vehicle and engine needs. A limited product selection from the other retrofit providers may affect you because retrofits that are not compatible with your engines may cause DPG and even engine failure.

4 Regulation Expertise & Compliance Planning

FleetCrew's goal is to provide Emission Compliance with Confidence® to California fleets affected by CARB regulations. Our compliance experts are continuously educated on CARB's ever-changing regulations. We maintain close relationships with government agencies and rule-makers to keep fleets informed and up-to-date on current events and the latest regulation changes.

5 Educational Training

At FleetCrew, we don't simply sell you a "box." We provide you with the necessary training tools and materials that are conducive to you becoming a well-informed, prepared fleet manager. We offer free educational events to help fleets with the compliance process and complex regulations. Trainings are available in a "Lunch & Learn" format or through on-line webinars for your convenience. In addition, we offer DPF Maintenance Training for your maintenance team on retrofit operation and how to properly maintain them. Finally, as an added service we offer personalized training at your facility.

6 Durathon DPF Maintenance Services

To help you protect your investment and ensure long-term CARB Emission compliance, we offer maintenance programs for your DPF substrate servicing needs. In addition, to keep your fleet running with minimal equipment downtime, we offer mobile on-site cleanings and also substrate cleaning services at our fixed facilities. Should your substrate need a deeper clean, we can bake your substrate to ensure maximum cleaning. Finally, at time of substrate removal/replacement, we can inspect your engine and/or DPF system for any signs of additional maintenance service needs.

7 Reporting & Record-Keeping

Our proprietary FleetCrew IQ™ technology is an online database designed to store your fleet's information and keep a running log of your service history and much more, allowing for accurate CARB reporting in DOORS and TRUCRS. In addition, FleetCrew safeguards your fleet information by keeping a complete back-up of all records. The IQ™ platform is a unique tool available exclusively at FleetCrew for your reporting and record-keeping needs. It gives you real-time access to your fleet information, such as compliance records, opacity data logging and baseline engine information, commissioning and installation files, plus all warranty and service records.

8 Complete California Coverage

Whether you are a service a small fleet in a remote location, or a large multi-site fleet, FleetCrew has mobile service teams that can ensure minimum downtime for your fleet during installation or service. And our fixed service locations throughout Southern California provide yet another alternative for your comprehensive equipment and emission service needs.

9 ARB TRUCRS & DOORS Support

Whether you are a small fleet with a few trucks or a large fleet with multiple vehicles, FleetCrew has you covered in ARB's TRUCRS and DOORS Reporting. Our expert consultants will guide you through the auditing and reporting process to make sure you can receive your Certificate of Compliance every year.
